# The Age Advantage in Youth Football

Steve Lawrence Dr. Laura Jonker Jan Verbeek

# Background

Does the 'cut-off date eligibility rule' cause relative age effects?

The universal rule which governs youth participation:

'Players are eligible ... ... to play in the competition ... ... if they were born on or after ... ... 1 January YYYY'

#### Dataset courtesy KNVB & Gracenote (Infostrada)

- 15,088 matches, across 64 competitions, in 2010-16, from ages Under 12 to First Team
- Variables:

Average Team Age: ATA (mean cohort age)
Relative Age index: RAEi (% of players born in 1<sup>st</sup> half-year)
Home/Away

Measured against win/draw/lose converted to PPG

#### Average Team Age (ATA) Profile RAEi 0.73 ATA 16.56

© stevelawrence

#### Relative Age Bias KNVB O14 – O19

based on match participation 2014-16 n=82,471

#### RAEi = 0.68

#### PPG in perspective - Premier League 2018/19 Home teams 1.62 PPG - Away teams 1.14 PPG

3 2 6. Man U PPG (Points per Game) 1.74 PPG 14. Bournemouth 1.18 PPG 1 0 0.33 0.00 0.67 1.00 Goals Percentage | Goals For / Total Goals

Premier League 2018/19 - Round 38

#### Win/draw/lose pie chart & PPG bar chart Youth ages (n=5,707) 1.52 v 1.31 PPG

#### PPG Charts with increasing Age – 10 age cohorts

# Comparative PPG trajectories for home, older & more RAEi biased teams

#### At U12 home teams accrue 1.56 PPG (away teams 1.32 PPG) at Premier League level it is 1.62 PPG (1.12 PPG)

(we organise Home & Away fixtures to compensate)

### Across youth age groups, the older team accrued 1.52 PPG & the younger team 1.31 PPG

An Age Advantage is still evident at U23

n.b. volatility at U14, U15 & U16 where minimal age difference between teams occurs

PPG - trajectories across ages (15,088 matches - 64 competitions - 10 age groupings)

@stevelawrence

Within a cut-off date eligibility system an older team must necessarily consist of players with birthdates biased towards the cut-off date. We should therefore expect to see a relative age advantage.

## Observations

- At youth ages older teams tend to win more matches, so we see an 'Age Advantage' ...
- ... & within a cut-off date eligibility system ...
- ... an older team necessarily means a more biased team, so we see a 'Relative Age Advantage'.

#### p-values and chi-square values for 8 youth groupings & the semi-pro age grouping.

| Age Group            | ATA    | RAEi  | n     | Home/Away    | Home/Away | ATA          | ATA    | RAEi         | RAEi   |
|----------------------|--------|-------|-------|--------------|-----------|--------------|--------|--------------|--------|
|                      |        |       |       | p-value      | chi-sq    | p-value      | chi-sq | p-value      | chi-sq |

#### Relative age advantage diminishes with increasing cohort age

RAEi v ATA (15,088 matches - 64 competitions)

#### At U12, U14 & U16 where the mean age difference between teams is tightest (<0.16 years with RAEi at 0.65) match results are more volatile.

Mean age difference between teams (15,088 matches - 64 competitions - 10 age groupings)

# Conclusion

 'The pursuit of competitive advantage, in youth football, drives up the average team age, which in turn, within eligibility cut-off date silos, causes relative age bias.'

## Is there a logical alternative?

- The data indicates that where mean age differences between teams tend towards zero, match results become more random ...
- ... & it is self-evident that if neither team is older then the older team can't win ...
- ... & it being impossible to pursue an age advantage a relative age advantage cannot arise.
- Is there a logical alternative to the cut-off date eligibility rule which would encourage teams of a similar average age to compete?

The 'Average Team Age' (ATA) Rule

- Your squad may consist of 18 players, whose combined average age (ATA) is not older than 14.0 years on 1 September 2017 (the first day of the competition) and ...
- ... the age difference between the oldest player and the youngest player of your squad may not be more than 2.0 years

## The rule sets the mean age (ATA) & the range
