

- examples (by subject)
 - ANCOVA, 204–217
 - ANOVA
 - one way, 171–172
 - three way, 191–195
 - two way, 178–184
 - Bayes theorem illustration, 4
 - Bayesian variable selection, 414–419
 - binomial response model, 263–268
 - bivariate Poisson model, 293
 - BOA illustration, 457–460
 - CODA illustration, 453–457
 - conditional predictive ordinate, 376–378
 - conjugate analysis
 - for normal data, 21–24
 - for the Poisson rate, 15–18
 - for the probability of binomial data, 18–21
 - DIC, 221–226
 - Doodle illustration, 439–441
 - gamma model, 281–282
 - generalized linear mixed model, 322–325, 327–331, 334–336
 - generalized Poisson model, 287
 - Gibbs sampling illustration, 72–74
 - goodness-of-fit, 368–374
 - grouped data, 287
 - hierarchical model, 308–317, 319–320, 322–325, 327–332, 334–337
 - information criteria, 429–431
 - inverse Gaussian model, 278
 - log-normal model, 281–282
 - logistic regression, 263–268
 - logit GLMM, 329–332
 - marginal likelihood computation, 399–405
 - matched-pair binary data, 327–329
 - meta-analysis, 319–320
 - Metropolis–Hastings illustration, 56–71
 - missing values, 345–353
 - models for counts, 245–255, 284, 287, 290–291, 293, 315–317, 334–336
 - models for integer responses, 296
 - models for positive responses, 281–282
 - Monte Carlo integration, 33–34
 - negative binomial model, 284
 - ordered predictive values, 359
 - overdispersion, 366
 - Poisson–gamma model, 315–316
 - Poisson–log-normal model, 316–317
 - Poisson difference model, 296
 - Poisson GLMM, 334–337
 - Poisson mixture model, 315–317
 - Poisson regression, 245–255
 - posterior predictive ordinate, 360–361
 - prediction, 347–353
 - predictive model evaluation, 424
 - predictive
 - analysis for normal models, 383–386
 - checks for the shape of the distribution, 366–368
 - cumulative frequencies for continuous data, 357–358
 - frequencies for discrete data, 354–356
 - random effects model, 313
 - random walk illustration, 46–55
 - regression, 157–161, 164–167, 221–226
 - repeated measurement model, 308–312
 - residuals, 363–365
 - script illustration, 444–445
 - state space model, 313–315
 - stepwise variable selection using DIC, 221–226
 - Weibull model, 281–282
 - WinBUGS
 - data specification, 104–105
 - model specification, 107–108
 - running MCMC, 125–132
 - zero inflated Poisson model, 290–291
